Trans. of Zhurnal Tekhnicheskoy Fiziki i Teyoricheskoy
 Fiziki (USSR) 1968, v. 34, no. 7, p. 659-667.

DESC (H) FORSC. Solids, Surfaces, Surface motion.
 Drops, Motion.

An examination is made of the variation of contact
 angles caused by the inclination of a solid surface on
 which a drop of liquid rests, as well as of the limiting
 value of the angle of inclination at which the drop begins
 to run down. It was found that the running down of a
 drop consists in the pouring forward of the liquid on
 which the drop is composed and is a simultaneous step.

Trans. of [Zhurnal Eksperimental'noi i Teoreticheskoy Fiziki] (USSR) 1966, v. 19, no. 5, p. 383ff.

A detailed comparison of the absorption spectra of the crystal and vapor of naphthalene shows that, in addition to those electronic series which have corresponding members in the vapor, there exist also electronic levels peculiar to the crystal. The spectral transitions to these latter levels from the normal one consist of sharp, polarized, line spectra. Transitions to these latter levels correspond to levels of the molecule in the gas phase, correlate well with the polarized line spectra of the crystal. The first category of transitions have the symmetry of the crystal, while the second have the symmetry of the molecule. The normal (Chemistry-Physical, 19, v. 5, no. 2) (over)
